

Name: _____

1 Conditionally Showing Random RGB Images

Follow these directions to get two random 64×64 RGB images.

1. `A = rand([64,64,3]);`
2. `B = rand([64,64,3]);`

You should now have two random 64×64 RGB images. You can show these images in a similar way you plot data in a figure with the command `imshow(<an array>)`.

2 Questions

Write code in MATLAB.

1. (3 pts) Write MATLAB code to set all numbers in A that are less than 0.9 to 0.0;
2. (7 pts) Write MATLAB code to show A (i.e. `imshow(A)`) if the average value of A is less than 0.095 (i.e. `mean(A, 'all') < 0.095`), else show B.
