

Name: _____

MATLAB commands you might use

dot(x,y) : gives the dot product of two vectors of the same dimension

norm(x) : gives the norm (magnitude) of the vector x. (i.e. $\text{norm}(x) = ||x||$)

1 Review Array Operations (4 pts)

Give MATLAB code to compute the vector projection of u onto v . (Note it's the equation in the figure above that projects the vector u to a vector along the vector v that makes a right triangle with u)

2 Multidimensional Arrays (6 pts)

Give MATLAB code to plot $\exp(-\alpha t) \sin(2\pi\omega t)$ with a grid of $L = 500$ uniform points over $[0, 3]$. Add a title and axes labels to your plot.
